DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submission filed on October 31, 2007, has been entered.

Status of Application, Amendments, and/or Claims

2. Claims 519-535, 537-555 and 557-567 are currently pending and under examination. All arguments have been fully considered and thoroughly reviewed, but are deemed not persuasive for the reasons that follow. Any objections and rejections not reiterated below are hereby withdrawn.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 519-535, 537-555 and 557-567 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-61 of U.S. Patent No. 6,903,206 B1.

Although the conflicting claims are not identical, they are not patentably distinct from each other. The subject matter of the claims of the instant application encompass the claims of the '206 Patent, which are drawn to kits for amplifying a target nucleic acid sequence contained in a target nucleic acid which may be present in a sample, said kit comprising: an amplification oligonucleotide containing a first base sequence which hybridizes to a second base sequence contained in said target nucleic acid under amplification conditions, wherein said first base sequence contains a cluster of at least four ribonucleotides modified to include a 2'-O methyl substitution to the ribofuranosyl moiety, wherein said amplification oligonucleotide does not include a label, and wherein said amplification oligonucleotide is capable of being extended and forming part of a nucleic acid extension product or directing the synthesis of a nucleic acid transcription product under said amplification conditions; and a nucleic acid polymerase; and variations thereof.

Allowable Subject Matter

4. Claims 519-535, 537-555 and 557-567 are free of the prior art. No prior art has been found teaching or suggesting a probe molecule having a first and second base regions that form a hybrid containing at least one 2'-O-alkyl ribonucleotide wherein the probe forms a complex with an RNA target but not with a non-targeted nucleic acid and wherein the complex comprises a single-stranded form of the probe.

Summary

5. No claims were allowed.
